

Digital Business Operations Suite

Optimize business workflows, break organisational silos and achieve business agility

digiBOS is Digital Business Operations Suite that automates and optimizes business operation by connecting people, departments, resources and support divisions to help enterprises achieve business agility. Powered by Appian, digiBOS draws meaningful insights from the evolving BPM practice and helps organisations realize process optimisation excellence to deliver business value.

digiBOS Landscape

The digiBOS Solution optimizes all these myriad processes by making them more transparent, repeatable, sustainable & cost effective.

Having BPM at its core gives a new dimension over the age old expertise applications by delivering integrated reporting & metric based performance check capabilities with real time process manageability.

Configurable workflows eliminate the need of manual intervention unless actively required for decision making. The design heightens standards of productivity, quality of work done along with suitable compliance management while keeping the costs intact.

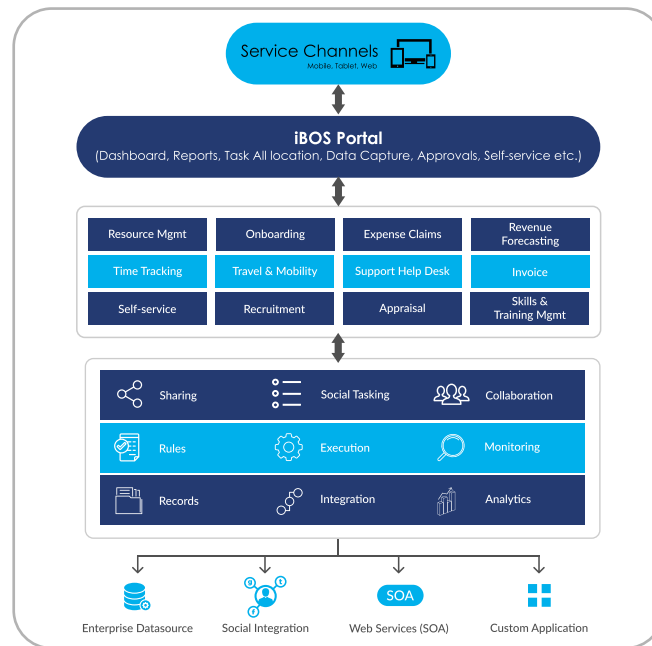

The product is built on Appian platform which is a market leader in Business Process Management. Appian's unique social and collaboration capabilities help to improve productivity. Appian's out of box features help to drive better business decisions, actions and results.

Application Benefits Galore

- Build once, deploy anywhere - The application is easily scalable in line with the growing business needs
- Configurable workflows which can be understood and changed by business users without relying on IT
- Dynamic SLA configurations to ensure the most crucial tasks are dealt on time
- Out of the box Business Activity Monitoring (BAM) Reports. Business can benefit from high level of custom reports which include-Process Model Reports, Process Optimization Reports, Summary Reports & Task Reports
- Continuous feedback to identify the bottlenecks and evolve as a robust application
- Ability to connect and interact with existing enterprise systems with standard integration protocols
- Multi-channel support & Cloud enabled solution

digibOS Architecture

Achieve Quantifiable Business Value

- Streamline and automate the enterprise business processes through collaboration with multiple participants across the enterprise
- Combine structured processes and rule-driven policies with ad hoc exchange of information and collaborative between participants to increase productivity
- Reduce organizational silos with effective Record Management & Social collaboration
- Quickly grasp the overall state of business such as global headcount, revenue forecasts, average time to on board new employee, and any other key business metrics on the go
- Reusable data model and processes provide an extensible architecture that can reduce the turn-around time to enable new LOB's and to launch new services
