

**Simplifying Asset
Management**

**iAMS - Asset Management Solution
Listed on Appian App Market**

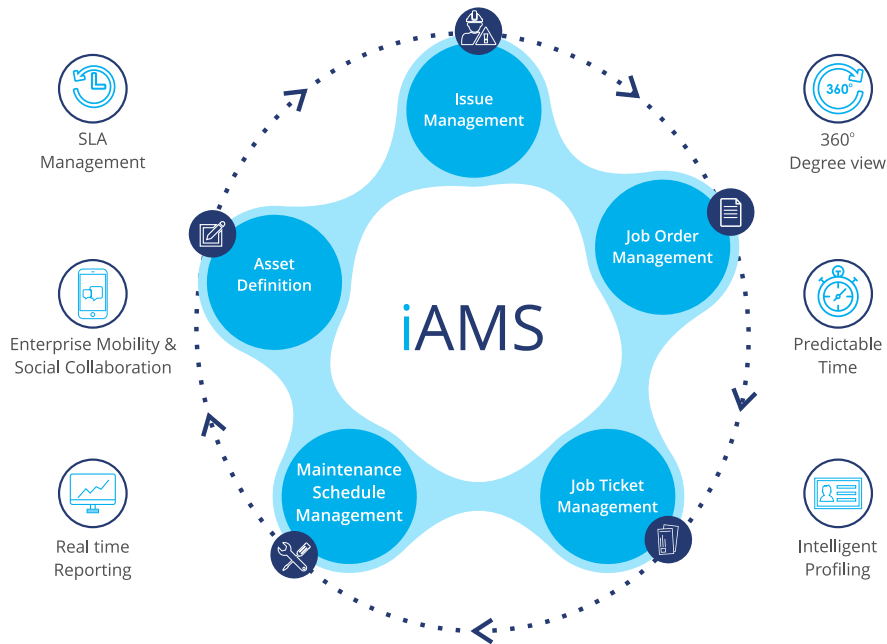

Overview

Incessant's Asset Management Solution helps organizations maximize the revenue potential of an asset through standard, predictable and scheduled maintenance.

The built-in features allow users to create and track assets, apply scheduled maintenance plans on assets, tag issues to an asset, manage job orders/tickets to resolve issues, predict completion time of maintenance and generate reports. The 360-degree view of an asset allows the user to view the utilization and productivity details of an asset including all future maintenance plans.

Business Challenges

- ◆ Lack of information about an asset and its utilization
- ◆ No pre-defined hierarchy of components, and parts (Bill of Materials) which can be easily reused and linked for new assets
- ◆ Inability to track usage parameters and predict maintenance scheduling for an asset which could lead to non-compliances
- ◆ Limited visibility of asset life span leading to reduced utilization and revenue
- ◆ Lack of integration with inventory management systems resulting in potentially unavailable parts leading to wait times for repairs and servicing's
- ◆ Insufficient information regarding the availability of service engineers consequently causing delays in repairing an asset

Product Features

- ◆ Automated maintenance scheduling
- ◆ 360-degree view of asset, its maintenance history and future future servicing schedules
- ◆ Bettered planning, maintenance, cost control and visibility of an asset
- ◆ Preventive maintenance and oversight of an asset leading to fewer issues around security and compliance
- ◆ Increased asset utilization and enhanced reporting (forecasting, asset history, and workload)
- ◆ Social integration capability to allow more collaboration amongst participants who are part of the process
- ◆ In-built procurement module that enables the purchase requisition to payment lifecycle. Integration to existing procurement management applications using connectors
- ◆ Improved Mean Time Between Failures (MTBF) and Mean Time To Recover (MTTR)

The Incessant Technologies Advantage

- ◆ More than 1200 person years of BPM experience and over 200 successful BPM implementations
- ◆ Proprietary BPM software delivery methodology, Incessant Delivery Assurance (IDeA)
- ◆ Industry leading Diamond project staffing model with 70% more seasoned resources versus industry standards
- ◆ Consistently ranked high in Appian's A-score program on methodology, proficiency and delivery quality
- ◆ A one-year Talent Onboarding training programme that includes Appian & Domain enablement
